

{r2dreader} end-to-end, 4.1M steps — SCORE-DERIVED picked rate, TRAINING rollouts

Training rollouts (exploring policy, training bank) — NOT the evaluation protocol; endpoints are not the table numbers.
Score-derived (score $\geq$ 1 $\Rightarrow$ picked): these runs predate the 2026-09-09 stage-emission fix, so their per-stage flags are unusable.
Neither arm has plateaued at 4.1M: final-quarter gain +0.059 human (4/4 seeds), +0.050 machine (3/4).
