

{dv3} ramp control -- dv3, pixels -- nested_ramp CONTROL (not sparse10)

observation: pixels; ladder: nested_ramp; human n=1, machine n=1; budget 1M; TRAINING RECORD, sampled actions, policy's own training starts; line = mean over seeds, band = 95 % bootstrap CI (2000 resamples), truncated where fewer than 3 seeds have data; datasets with fewer than 3 seeds (human, machine (DP teacher)) are drawn one thin line per seed, no band. Datasets: H = human demonstrations (dHfull_all, 74 tapes), M = machine (dDPfull_first, 72 tapes from a Diffusion Policy teacher), P = planner (planner72, 72 motion-planner tapes), T = r2dreamer teacher (72 tapes from one human-trained pixel r2dreamer). CONTROL condition: the ladder is nested_ramp, NOT nested_sparse10; it is not comparable with the sparse10 conditions and is shown for reference only.
