

Human vs machine demonstrations: effect size with 95 % CI  
shaded band = the registered  $\pm 0.10$  equivalence margin (ROPE)

A CI inside the shaded band supports equivalence; a CI wider than the band means the cell is underpowered, not that the arms match. Not plotted (no defined interval: every seed in each arm gave the identical count): pick\_rnd30\_dv3. Not plotted (superseded or withdrawn): robo\_bcrnn\_mh, robo\_bcrnn\_ph.
