

Human vs machine demonstrations: effect size with 95 % CI
shaded band = the registered ± 0.10 equivalence margin (ROPE)

A CI inside the shaded band supports equivalence; a CI wider than the band means the cell is underpowered, not that the arms match. Not plotted (no defined interval: every seed in each arm gave the identical count): pick_rnd30_dv3. Not plotted (SUPERSEDED - a re-score is overwriting these inputs): contact_r2d_bare, contact_r2d_push, carry_r2d_bare, carry_r2d_push, e2e_picked, e2e_contact_push, e2e_nested_honest, e2e_nested_proxy, e2e_slide_success.
