

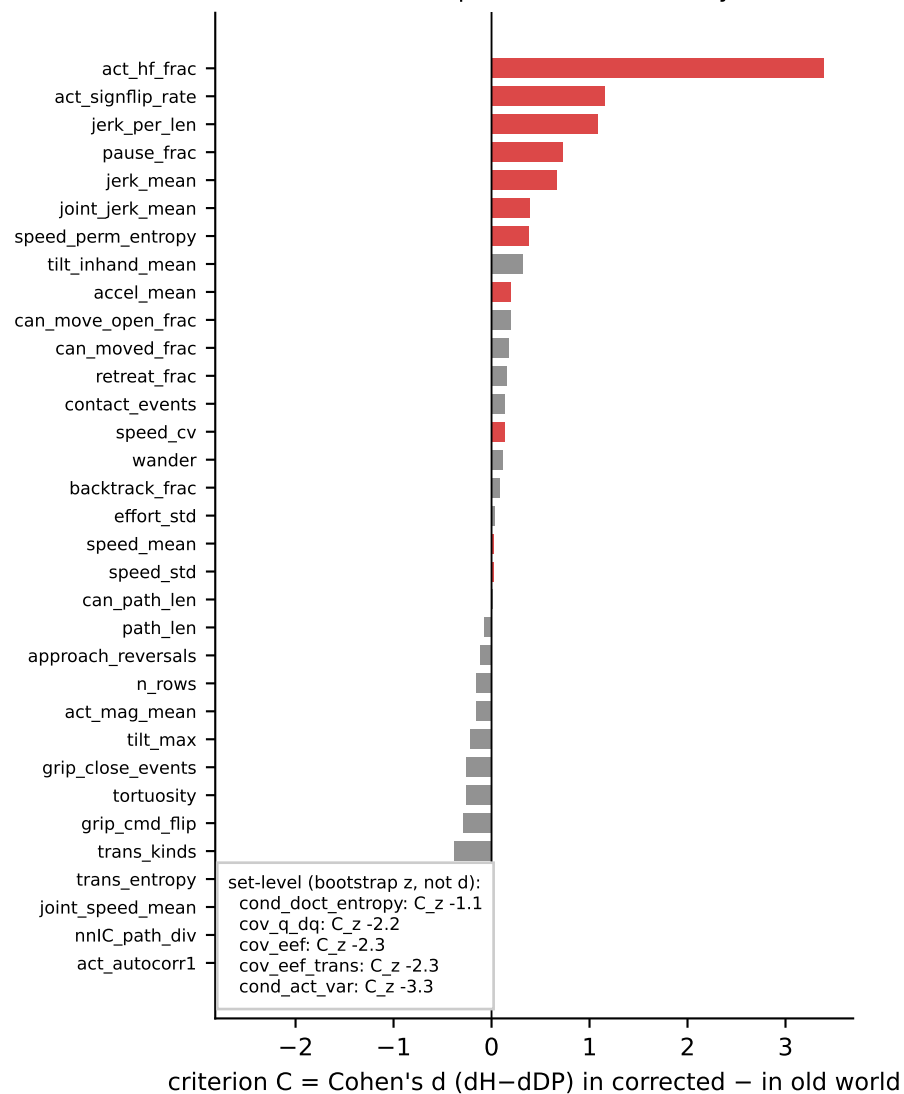

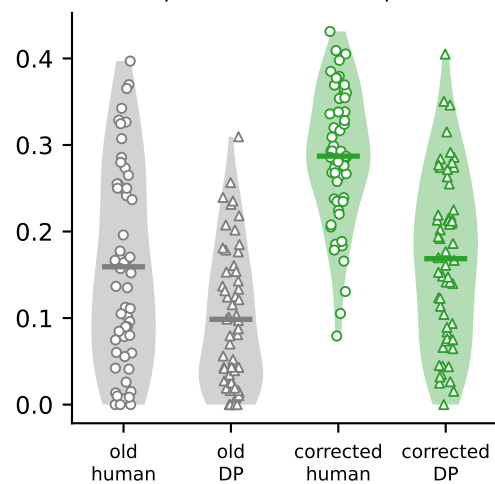

fig8: demo-tape properties that still separate human from machine in the CORRECTED world (228 tapes)

colour = world (grey old / green corrected), marker = source (circle human / triangle DP); screening study — hypothesis-generating, see WM_METRIC_2026-09-01.md

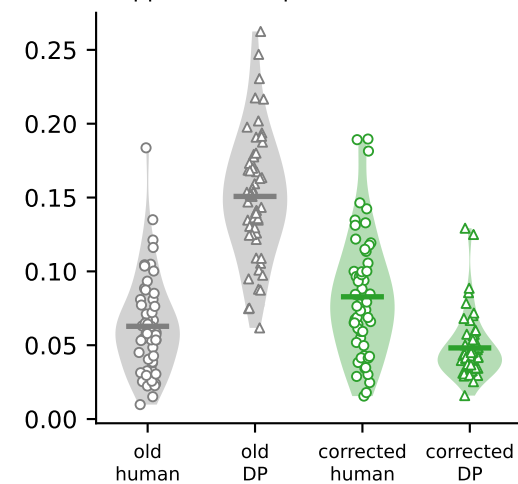

(a) all 33 per-tape metrics screened
(red = temporal/burstiness family)

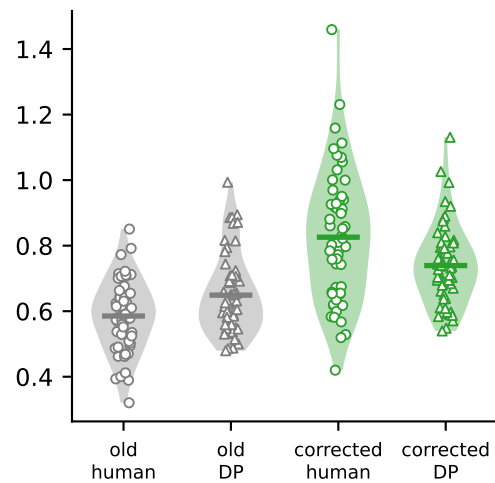

(b) pause fraction
(steps < 0.2x median speed)

(c) action high-freq power frac
(upper half of spectrum, arm dims)

(d) EEf jerk per unit path (1/m)

(e) action sign-flip rate
(dither; old-world DP artifact)
