

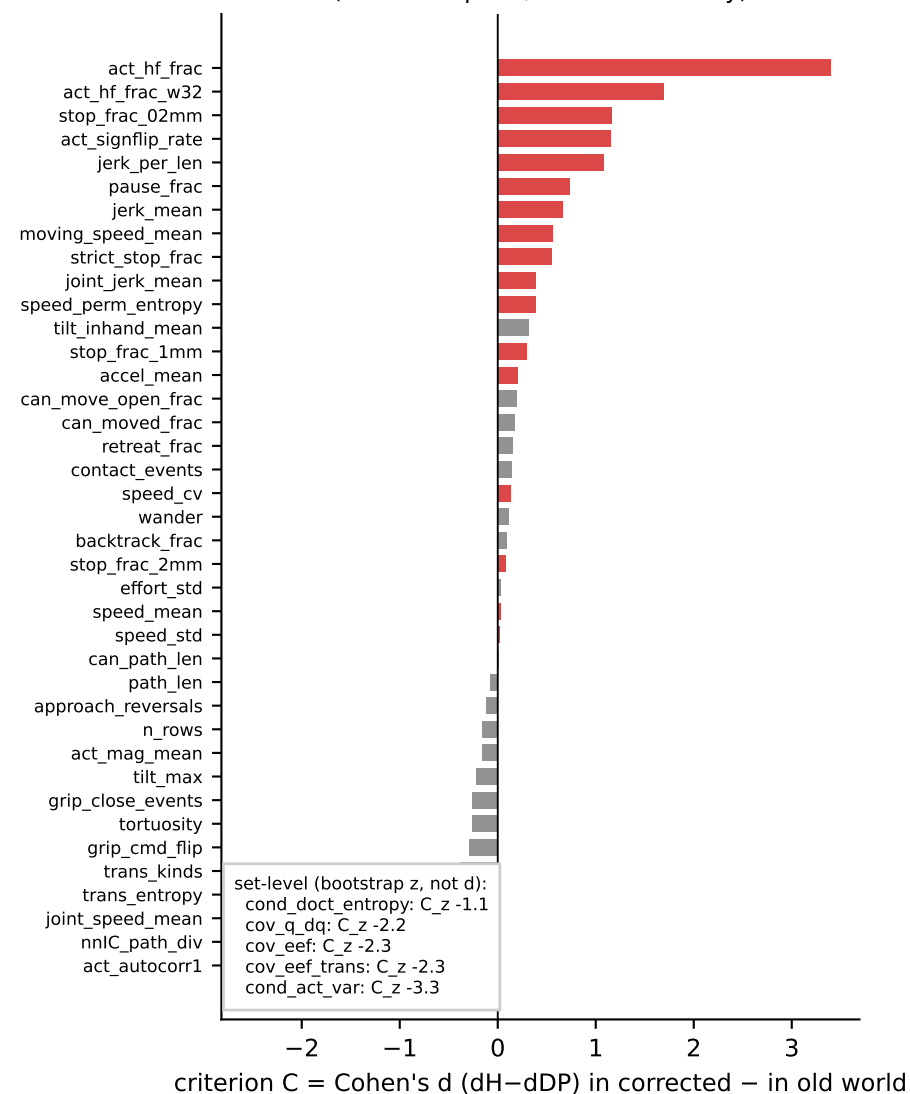

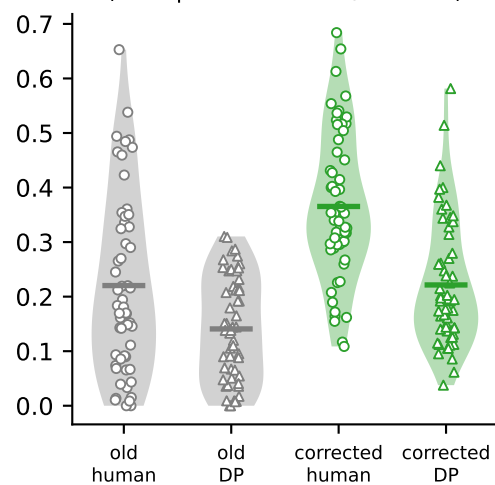

fig8: demo-tape properties that still separate human from machine in the CORRECTED world (228 tapes)
 colour = world (grey old / green corrected), marker = source (circle human / triangle DP); screening study —
 see WM_METRIC_2026-09-01.md +A2: stops-vs-creep is the robust headline, act_hf_frac demoted (w32 kills it)

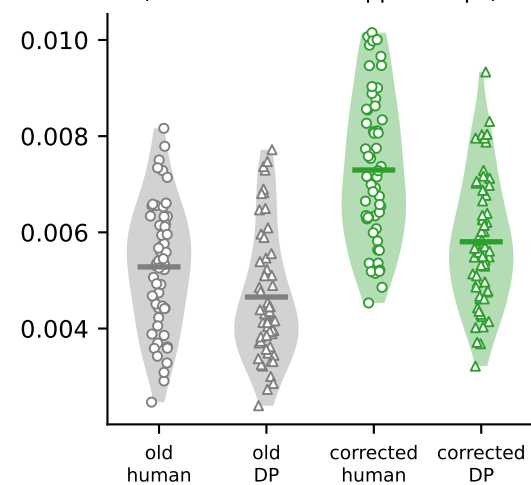

(a) all 39 per-tape metrics screened
 (red = temporal/burstiness family)

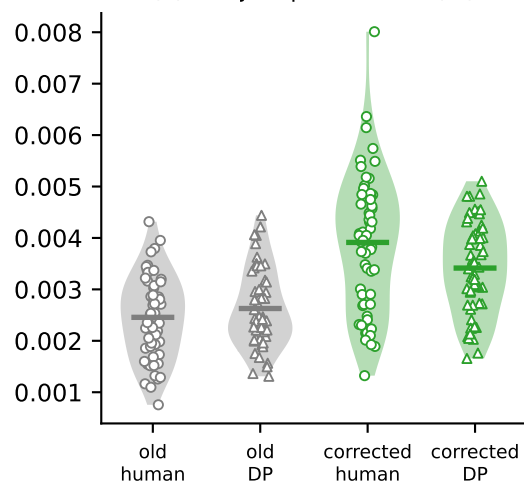

(b) full-stop fraction
 (EEF speed < 0.5 mm/decision)

(c) moving speed (m/decision)
 (mean over non-stopped steps)

(d) EEF jerk per decision (m)

(e) action sign-flip rate
 (dither; old-world DP artifact)
